DETAILED ACTION

Response to Arguments

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Applicant's arguments, filed 4-10-06, with respect to GB 2 397 276 in view of Hoy (US Patent 6,063,412) and in further view of Osada et al (US Patent 5,070,230) have been fully considered and are persuasive with respect to the Statement Letter of Substance of the interview of June 14, 2006, where GB 2 397 276 was disqualified as a reference. The rejection of claims 47, 48 and 51 has been withdrawn.

Allowable Subject Matter

Claims 1, 2, and 38-60 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

1. The Examiner is relying upon Applicant's arguments for the patentability of the instant claims, specifically Applicant's argument that Ahn teaches viscosity of the liquefied sugar component should be 50-90 Brix, however the 90 Brix solution has a viscosity of less than about 20 cp using the test method described in the application, even when the 90 Brix sugar solution was combined with maximum suggested concentration of TiO₂, the viscosity of the ink base was only about 500 cp was found persuasive and therefore the rejection of the claims has been withdrawn.

2. an edible ink composition comprising a pigment density of about 0.1 g/l to about 0.25 g/l and an ink density of about 1.1 g/l to about 2.0 g/l.
3. a lithographic printing process comprising a) providing a master with an ink receptive layer; b) contacting the ink receptive layer with an edible ink with a viscosity of about 2000 to about 16000 cp; and c) transferring the ink layer to a substrate to form an image layer.
